# Bootstrap 5

Front-end Framework

---

---

# What is Responsive Web Design?

- Responsive web design is about creating web sites which automatically adjust themselves to look good on all devices, from small phones to large desktops.
- Bootstrap is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first web sites.
- Bootstrap is completely free to download and use!

# What is bootstrap

- Bootstrap is a free front-end framework for faster and easier web development
- Bootstrap includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals, image carousels and many other, as well as optional JavaScript plugins
- Bootstrap also gives you the ability to easily create responsive designs

---

# Bootstrap History

- Bootstrap was developed by Mark Otto and Jacob Thornton at Twitter and released as an open-source product in August 2011 on GitHub.
- Advantages of Bootstrap:
  - **Easy to use:** Anybody with just basic knowledge of HTML and CSS can start using Bootstrap
  - **Responsive features:** Bootstrap's responsive CSS adjusts to phones, tablets, and desktops
  - **Mobile-first approach:** In Bootstrap 3, mobile-first styles are part of the core framework
  - **Browser compatibility:** Bootstrap is compatible with all modern browsers (Chrome, Firefox, Internet Explorer, Safari, and Opera)

---

# Where to Get Bootstrap?

- There are two ways to start using Bootstrap on your own web site.
  - Download Bootstrap from [getbootstrap.com](https://getbootstrap.com)
    - If you want to download and host Bootstrap yourself, go to [getbootstrap.com](https://getbootstrap.com), and follow the instructions there.
  - Include Bootstrap from a CDN
    - If you don't want to download and host Bootstrap yourself, you can include it from a CDN (Content Delivery Network).
    - MaxCDN provides CDN support for Bootstrap's CSS and JavaScript. You must also include jQuery.

# Bootstrap CDN

- You must include the following Bootstrap's CSS, JavaScript, and jQuery from MaxCDN into your web page.

```
<!-- Latest compiled and minified Bootstrap CSS -->
<link rel="stylesheet" href="https://stackpath.bootstrapcdn.com/bootstrap/5.0.0-alpha1/css/bootstrap.min.css" crossorigin="anonymous">
<script src="https://cdn.jsdelivr.net/npm/popper.js@1.16.0/dist/umd/popper.min.js"
crossorigin="anonymous"></script>
<script src="https://stackpath.bootstrapcdn.com/bootstrap/5.0.0-alpha1/js/bootstrap.min.js"
crossorigin="anonymous"></script>
```

Advantage of using the Bootstrap CDN:

- Many users already have downloaded Bootstrap from MaxCDN when visiting another site. As a result, it will be loaded from cache when they visit your site, which leads to faster loading time. Also, most CDN's will make sure that once a user requests a file from it, it will be served from the server closest to them, which also leads to faster loading time.

---

# Custom Elements

- Typography
- Forms
- Tables
- Buttons
- Images

Bootstrap has classes and snippets to easily make your HTML elements look much cleaner and more stylish

---

# CSS Components

- Glyphicons
- Dropdowns
- Button Groups
- Navbar
- Breadcrumbs
- Labels
- Badges
- Alerts
- Jumbotron
- Progress Bars
- Media Objects
- List Group
- Panels
- Wells
- Input Groups

---

# JavaScript Widgets

- Modal
- Dropdown
- Tabs
- Tooltip
- Popover
- Alert
- Carousel / Slider

Bootstrap uses over a dozen custom JavaScript/JQuery plugins that can be used by simply including **JQuery** and the **bootstrap.js** file

# Grids rules and uses

- Bootstrap's grid system allows up to 12 columns across the page.
- If you do not want to use all 12 columns individually, you can group the columns together to create wider columns:

```
<div class="col-md-12">Span 12 columns</div>
```

```
<div class="col-md-6">Span 6</div><div class="col-md-6">Span 6</div>
```

```
<div class="col-md-4">Span 4</div><div class="col-md-8">Span 8</div>
```

```
<div class="col-md-4">Span 4</div><div class="col-md-4">Span 4</div> <div class="col-md-4">Span 4</div>
```

- Bootstrap's grid system is responsive, and the columns will re-arrange automatically depending on the screen size.

.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1
.col-md-8								.col-md-4			
.col-md-4				.col-md-4				.col-md-4			
.col-md-6						.col-md-6					

---

# Grid Classes

- The Bootstrap grid system has four classes:
  - xs (for phones)
  - sm (for tablets)
  - md (for desktops)
  - lg (for larger desktops)
- The classes above can be combined to create more dynamic and flexible layouts.

# Create Web Page with Bootstrap (1)

- the HTML5 doctype
  - Bootstrap uses HTML elements and CSS properties that require the HTML5 doctype.
  - Always include the HTML5 doctype at the beginning of the page, along with the lang attribute and the correct character set:

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
  </head>
</html>
```

# Create Web Page with Bootstrap (2)

- Bootstrap is mobile-first
  - Bootstrap 3 is designed to be responsive to mobile devices. Mobile-first styles are part of the core framework.
  - To ensure proper rendering and touch zooming, add the following <meta> tag inside the <head> element:

`<meta name="viewport" content="width=device-width, initial-scale=1">`

- The width=device-width part sets the width of the page to follow the screen-width of the device (which will vary depending on the device).
- The initial-scale=1 part sets the initial zoom level when the page is first loaded by the browser.

---

# Create Web Page with Bootstrap (3)

- Containers
  - Bootstrap also requires a containing element to wrap site contents.
  - There are two container classes to choose from:
    - The .container class provides a responsive **fixed width container**. ([See Sample](#))
    - The .container-fluid class provides a **full width container**, spanning the entire width of the viewport. ([See Sample](#))
- **Note:** Containers are not nestable (you cannot put a container inside another container).

# Basic Structure of a Bootstrap Grid

+

```
<div class="row">
  <div class="col-*-*"></div>
</div>
<div class="row">
  <div class="col-*-*"></div>
  <div class="col-*-*"></div>
  <div class="col-*-*"></div>
</div>
<div class="row">
  ...
</div>
```

+

- First; create a row (<div class="row">). Then, add the desired number of columns (tags with appropriate .col-\*-\* classes). Note that numbers in .col-\*-\* should always add up to 12 for each row.

# Tables

#	First	Last	Handle
1	Mark	Otto	@mdo
2	Jacob	Thornton	@fat
3	Larry the Bird		@twitter

- A **basic** Bootstrap table has a light padding and only horizontal dividers.
  - The `.table` class adds basic styling to a table:
- **Striped Rows**
  - The `.table-striped` class adds zebra-stripes to a table:
- **Bordered Table**
  - The `.table-bordered` class adds borders on all sides of the table and cells:
- **Hover Rows**
  - The `.table-hover` class enables a hover state on table rows:
- **Responsive Tables**
  - The `.table-responsive` class creates a responsive table. The table will then scroll horizontally on small devices (under 768px). When viewing on anything larger than 768px wide, there is no difference:

# Button component

## Button Styles

Bootstrap provides seven styles of buttons with the following classes:

.btn-default  
.btn-primary  
.btn-success  
.btn-info  
.btn-warning  
.btn-danger  
.btn-link

The button classes can be used on the following elements:

`<a>`            `<button>`            `<input>`

- `<button class="btn btn-primary"></button>`
- `<a class="btn btn-danger btn-lg"></a>`
- `btn-outline-secondary`
- Disabled, active
- `data-bs-toggle="button"`
- `<div class="btn-group"> </div>`

# Forms

Class="form-label"

Class="form-control"

**Form-control form-color-picker**

Form-select

Form-select-lg

**Form-check**

Form-check-input

Form-check-label

**Class="Input-group"**

**class="form-floating"** (floats label within the input)

**Required (for validation)**

Is-valid is-invalid

Valid-feedback, invalid-feedback

# Alert component

- `<div class="alert alert-success alert-dismissible"  
role="alert"> Alert  
    <button class="btn-close" aria-label="close"  
data-bs-dismiss="alert"> </button>  
</div>`

A simple warning alert with [an example link](#). Give it a click if you like. ×

A simple info alert with [an example link](#). Give it a click if you like. ×

A simple light alert with [an example link](#). Give it a click if you like. ×

A simple dark alert with [an example link](#). Give it a click if you like. ×

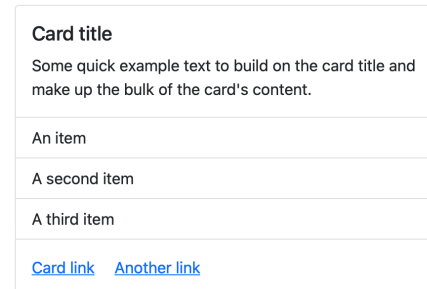

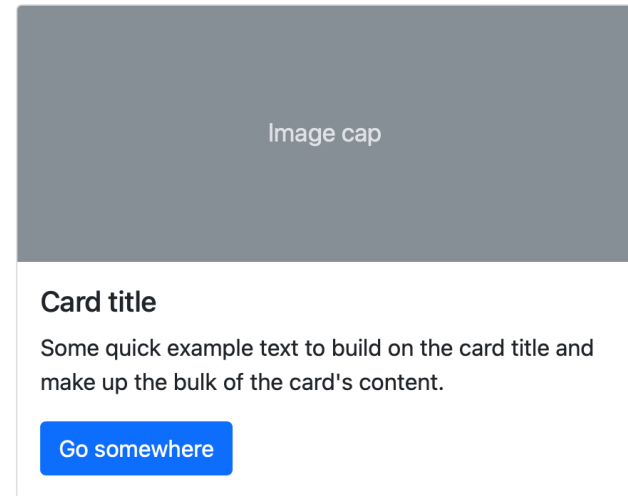

# card component

+

- `<div class="card">`
- ``
- `<h2 class="card-header">`
- `<div class="card-body card-img-overlay">`
- `<div class="card-title">`
- `<div class="card-subtitle">`
- `<div class="card-text">`
- `<div class="card-footer">`

`<img class="card-img-bottom" src="">`

`<div class="card-group">` (combine multiple cards)

# modal component

```
<button class="btn btn-primary" data-bs-toggle="modal" data-bs-  
target="#modal">open</div>  
  <div class="modal" fade id='modal' >  
    <div class="modal-dialog modal-dialog-scrollable modal-fullscreen">  
      <div class="modal-content">  
        <div class="modal-header">  
          <button btn-close data-bs-dismiss="modal"></button> (for the X sign)  
        <div class="modal-body">  
          <div class="modal-footer">
```

# modal component

```
<button class="btn btn-primary" data-bs-toggle="collapse" data-bs-  
target="#row" aria-expanded="true" aria-controls="row">Toggle</div>  
<div class="row">  
  <div class="col">  
    <div class="box"></div>
```
